

Project #2  
**Drawing with SDL 2.0**  
CpSc 4160/6160: Data-Driven 2D Video Game Development  
Computer Science Division, Clemson University  
Brian Malloy, PhD  
September 13, 2017

## **Due Date:**

In order to receive credit for this assignment, your solution must meet the requirements specified in this document and be submitted, using the **handin** facility, by 8 AM, Thursday, September 21<sup>st</sup>, 2017. The handin close date is set at three days after the due date. If you submit after the due date but before the handin close date there will be a ten point deduction. No submissions will be accepted after the handin close date and no submissions will be accepted by email.

## **Project Specification:**

For this project you must use the SDL 2.0 drawing primitives to draw a figure. These draw function primitives include: `SDL_RenderDrawLine`, `SDL_RenderDrawPoint`, and `SDL_RenderDrawRect`. There are examples that use these primitives in the course repository.

In addition, your program must include at least two `C++` classes: one that you write from scratch, and one that I wrote called `FrameGenerator`. This latter class, `FrameGenerator`, is included in the project 2 directory and will generate an image in a directory called `frames`. You must create the `frames` directory as a subdirectory of your project directory. Both of these classes must use initialization lists and your class must include at least one overloaded operator. Before you compress and submit your project make sure that (1) your program creates a `bmp` of your image, and that you have used **make clean** in your project directory.

In using the SDL functions, your figure must include:

1. Usage of each primitive at least once,
2. at least 7 distinct lines or shapes, and
3. at least 3 colors.

An example is illustrated in Figure 1.

Figure 1: A target with an arrow shaft in the middle of the bullseye
